

Living. Data.

simply. done.

Dear clients,
those who already work with us and future clients,

It is my pleasure to introduce you to a family company that has been finding solutions to exciting challenges for many just as exciting years. REISSWOLF, a company that I founded in Hamburg over 30 years ago, has become synonymous with secure file and data destruction. This is a source of great pride not only for me but for everyone who works at REISSWOLF. We have become a company with operations all across Europe – highly successful, including in the areas of digitisation and archiving. None of this would have been possible without one very central value: trust.

Trust represents a special type of investment. It is a value based on a relationship and cannot be bought or guaranteed by contract. Our work with others has always been aimed towards developing long-term partnerships. And it has been implemented so well that many of our clients, employees and service providers have been working together with mutual trust for decades.

The complexity of the services that secure data management entails calls for in-depth knowledge and proven experience. Transferring our data expertise into customised solutions time after time has never stopped being an exciting challenge. But, at REISSWOLF, we are only truly successful, in our own terms, if the trust placed in us ultimately leaves our clients with a sense of assured satisfaction. Day after day. Year after year. Living. Data. Forever.

Volker Henning

Living. Data.

Living. Data.

Living. Data. ...for us at REISSWOLF, this means each individual living and working with and for data.

Data is part of our everyday professional and private lives. To make working with data as pleasant as possible, REISSWOLF has been committed to the professional handling of data of all types for over 30 years, imposing reliable benchmarks and DIN standards.

Whether data is being securely destroyed, archived or digitised, REISSWOLF regards it as a fundamental aspect of life and handles it as a matter of course and confidentially.

As a result of digitisation, living with data has become more complex and multifaceted.

We have responded to the changing needs of our clients by expanding the range of services we provide. Because of this, we are now able to cater to diverse client and market requirements with great flexibility.

This is a key factor in our success, as all of our clients find themselves in a unique data situation with their companies.

Whether it is a matter of analogue or digital recording, archiving or destruction, there is hardly anything as specific to a company as its internal data and how it handles this data every day.

1985 REISSWOLF HAMBURG founded by Volker Henning

1989 Foundation of REISSWOLF DEUTSCHLAND Group

simply. done.

Many a valuable formula,
treatise or equation has been written up on a blackboard,
only to be wiped away without a trace.

We consider it a similar situation when highly sensitive data needs to be destroyed correctly and securely.

Keeping confidential information safe until its final destruction is our highest priority.

For file and data medium destruction, we provide an all-inclusive service with the strictest security standards. Only REISSWOLF provides fire-proof aluminium security containers with special electronic locking systems and transports them in its own hermetically sealed Safety Cars.

The complete destruction procedure is performed in accordance with section 5 of the German Federal Data Protection Act and DIN 66399. You determine the protection class and protection level – REISSWOLF gives you process reliability.

We call this the shred. service.

Whether paper, digital or in the form of physical data media such as hard disks, floppy disks, CDs, films or memory cards, everything is completely and securely destroyed and converted into environmentally recyclable material. Our clients thus contribute to active environmental protection.

archive. service.

Our clients are able to concentrate on the essential, as their data environment is supported by a service that eases the strain.

Day-to-day business with our archiving service saves time and space and is geared towards the data flows that are set to come our way in the future.

With all available information consolidated in our centralised RWAS archive software, you have an optimum and efficient overview. RWAS organises the entire digitally recorded physical file stock.

Individually tailored to meet the client's needs, RWAS researches, manages and maintains the archive stocks.

This allows files to be requested rapidly and convenient additional functions to be selected flexibly.

Our active archive management aims to increase productivity, improve quality and shorten through put times.

2000 Entered physical archiving market

2006 Market leader in file and data destruction in Switzerland, Austria, the Netherlands and Sweden

2001 Market launch of RWAS archive software

2007 Network expanded to southern and eastern Europe

digital. service.

Documents are being accessed and exchanged via company networks with increasing speed. The challenge here for our clients is not only rapid recording and processing but also the protection of their often confidential documents.

REISSWOLF solutions include highly complex encryption strategies and secure application scenarios. Both are supported by easy handling, as used by our clients every day.

Technological progress enables us to establish entirely new corporate forms in which physical sites play a secondary role. It is now possible to combine a large number of branch offices in a virtual compa-

ny network. Whether for work across multiple departments, mobile sales or franchise partners, processes need to be available transparently and centrally and accessible at any time. This increases productivity and flexibility and reduces fixed costs.

But even the most effective process is useless unless its implementation is appropriate for the application and user-friendly.

Our development department therefore concentrates on innovative handling and realises needs-based applications and solutions for all kinds of business models.

2014 Founding of digital service business unit

2015 Around 70 franchisees in 36 countries in Europe, Asia and Africa offer REISSWOLF services

2016 Market launch of REISSWOLF f.i.t. digital archive software

Living with data includes being able to access it from anywhere, at any time. Data can only be useful if they are available.

simply. done.

In the course of digital transformation, the penetration of technology is increasing in many companies. REISSWOLF sees this change as a major opportunity.

The use of new technologies no longer concerns purely efficiency or costs. The optimisation of processes is also essential.

REISSWOLF sees itself as a managing data scout for small and medium-sized companies, turning cutting-edge technologies and solutions into a strategic instrument.

Client requirements and market conditions that are constantly changing, along with the resulting new growth areas, are what motivate us every day.

The intelligent use of technologies allows our clients to hold their ground in a tougher competitive environment.

Technological expertise is an essential requirement for success in the digital world. We provide consulting to our clients across Europe in matters relating to the use of data-supported applications and technologies. As a service provider for SMEs, we consider ourselves a partner of our clients.

Close and transparent collaboration forms the basis for innovative data solutions. Our clients are always involved in project and process creation, as only they have the relevant knowledge of the sector and they know their internal workflows better than anyone else can.

Living. Data.

○ 2016 REISSWOLF Group expands by taking over CiBS Gesellschaft für technische Dokumentation und Archivierung mbH

○ 2017 Digital scan centres set up in Germany and Austria

○ 2017 The REISSWOLF team consists of around 930 employees

○ 2017 REISSWOLF digitises 60 million documents each year

The future seems vague, undetermined and a long way off – the future of work, however, is already here, and calls for an increasing amount of digital expertise.

Flexible work strategies, cloud collaboration tools for interdisciplinary teams of experts, algorithms as decision-makers in companies, systems that can network autonomously and make independent decisions, that are able to jointly implement learning processes faster and more sustainably than people ever could. Modern disruptive innovations make us question the validity of familiar working processes, and even go as far as making these processes obsolete. Simply hoping that you will be able to avoid too much adaptation is not an option. Your work processes all need to be redefined: technology-based, digital and intelligent, while retaining a human focus. It is not primarily a matter of IT, AI, IoT or Big Data. Primarily, what is needed is a new mindset, a new mental perspective. Design thinking and cognitive business are the crucial factors for success in the digital world. And these two things can only succeed if two values are upheld: trust and responsibility.

Successfully implementing digitisation requirements for our clients in efficient company workflows with corresponding technologies is for us the future of work – and it has already begun.
